

Mission Statement of Landcare Germany (DVL)

We are ...

... the umbrella organisation for landcare organisations in Germany. A hallmark of the DVL and its members is the equal and voluntary collaboration between representatives of agriculture, forestry, nature conservation and politics.

We aim to ...

... foster biodiversity and quality of life in our cultural landscape in a contemporary and sustainable manner. In all our work, we are committed to those who combine the use and creation of value from the landscape with the conservation of habitats for flora and fauna, as well as climate protection.

We offer ...

... expert services and advice on all aspects of landscape conservation and the preservation of natural resources in Germany. We bring together perspectives from the agricultural and forestry sectors, nature conservation and politics; we connect stakeholders and actively promote landscape conservation issues. We consolidate and represent the interests and experiences of our members at national and European level.

We work ...

... with practical and sustainable solutions and recommendations. Our thinking and actions are based on experience gained from regional landcare practice. We advocate our causes in a professional and objective manner. To this end, we collaborate with our members, interest groups, the scientific community, government departments and political bodies.
